A R T ificial Intelligence: Backbone or Bottleneck of Digitization?

Getting Closer to Digital Realities **and the Way to Handle them**

November 15-17, 2019

GRAND GARAGE

Linz, Austria

Objective

“Getting Closer to Digital Realities and How to Handle them?” is the theme of the International Conference on Artificial Intelligence, taking place at the GRAND GARAGE in Linz, Austria, **November 15-17, 2019**. The purpose of this special event is to draw the attention of the practitioners’ and research community to new approaches towards collective resilience and organization of intelligences for design.

Organized by researchers, educators, and practitioners, the intention is to support an open discussion about recognizing that digital transformation processes based on Artificial Intelligence reveals interesting essentials about the structure of our world and the artefacts we create.

The goal is to resonate on the issue how to integrate and fuse digital or human-driven approaches so that we can realize their collective design capabilities. We are interested how ART raises awareness for this fusion and how we will find a dialog along new production capabilities, such as social robotics and additive manufacturing at the crossroads of disciplines, including organizational science, mechatronics, industrial sociology, and business informatics.

This 3-day-learning journey aims to leverage reflective practice for contributors who are willing to become well versed in and appreciate digital realities while also being informed about their structural and systemic particularities. The conference will bring together

- Design Thinkers to ideate novel concepts and development procedures
- Consultants to instill multiple intelligences in organizational developments
- ARTists to articulate challenges and opportunities in creative ways
- Inquirers to ask performative questions
- Professionals like Information Managers to rethink handling collective intelligence
- Learners to bundle knowledge to intelligent task behavior
- Explorers to equalize space for various types of intelligence
- Researchers to reflect on the inherent logic of systems and learning paradigms, such as combining symbolic and sub-symbolic representations for deep learning
- Mindful leaders to scope intelligence towards mindful collective behavior

GRAND GARAGE is the leading space for creative reflections and generative breakthroughs, as it creates the future to experience it by digital and tangible means. For the first time, focused interaction will empower stakeholders to participate in progressing developments, including articulation work, design thinking, dynamic architecting, and additive prototyping, elaborated in so-creation settings.
